

Download Grass Pasture Identification Guide Missouri

This identification card details eight of the most prevalent species of grass in Missouri. The front includes illustrations of each species and identifying characteristics. The grasses are found across a wide range of habitats, from prairies and open woods to streams and wet lands. Native Warm-Season Grass Pastures Adding native warm-season grasses to pasture systems has resulted in increased gains on yearling cattle and improved performance of cow-calf herds during the summer when cool-season grasses (fescue, bluegrass) stop growing. Weed ID Guide, Weed Science Program. Weed Key. Search by Name Missouri has 276 species in the grass family, including well-known crop plants and our native prairie grasses. Distinguishing between the species can be difficult, but it's easy to learn some basics about the group.
