We will focus on only the best two techniques 1 for implementing OOP in JavaScript. Indeed, many techniques exist for implementing OOP in JavaScript, but rather than evaluate each, I choose to focus on the two best techniques: the best technique for creating objects with specialized functionalities (aka Encapsulation) and the best technique for reusing code (aka Inheritance). The key, however, is to learn something new each time. Before you start a project, have a goal in mind about what you want to learn or improve your knowledge of, and make sure that you're challenging yourself and growing as a developer, rather than solely doing what already feels comfortable. This is the editorial from our latest JavaScript newsletter, you can subscribe here. "What's the best book for learning JavaScript?" is a question that I've heard asked a lot lately. No. The JSON should all be data, and if you include a comment, then it will be data too. You could have a designated data element called "_comment" (or something) that would be ignored by apps that use the JSON data.. You would probably be better having the comment in the processes that generates/receives the JSON, as they are supposed to know what the JSON data will be in advance, or at least ...
